Johnson Ojo Oluwaseyi

Fullstack Software Engineer

Johnsonojooluwaseyi@gmail.com 07065877068 Lagos LinkedIn

PROFILE

Backend Engineer with 6+ years of experience **designing, building, and optimizing enterprise-grade applications**. Skilled in **.NET Core, SQL Server, Azure**, with a proven record of turning business needs into robust technical solutions. Strong background in **enterprise logistics, HR, and finance systems**, having delivered platforms that eliminated manual processes, cut operational costs, and improved visibility for decision-makers. Recognized for **end-to-end system ownership**, from architecture and API development to deployment and support, while collaborating with cross-functional teams to deliver impactful products at scale.

PROFESSIONAL EXPERIENCE

Senior Backend Engineer 06/2026 – Present
Lotus Bank (Ahead Digital Banking Platform) Lagos

- Own end-to-end delivery across 5 microservices (Onboarding/KYC, Cards, Islamic Investment, Transactions, Staff Auth) on a live banking platform
- Redesigned SmileID biometric-liveness verification to a stateless, mobile-owns model and resolved a production BVN/NIN identity-verification outage via root-cause log analysis
- Fixed critical Blusalt card-issuance failures and built a self-healing recovery flow for orphaned cardholders, plus enforced JWT validation on card endpoints
- Fixed Mudarabah (Islamic finance) profit-ratio and liquidation logic bugs, remediating a full security audit of the investment service
- Built Beneficiary V2 end-to-end and closed a full VAPT finding set on staff authentication (token hashing, audit persistence, injection fixes)

Backend Software Engineer 01/2026 – 06/2026
Money Master PSB Lagos
(MMPSB Verification Service — agent wallet management, fund transfers & transaction verification platform)

- Built a Clean Architecture (4-layer) .NET 9 backend — Presentation, Service, Infrastructure, and Domain layers — following SOLID principles with full dependency injection
- Implemented secure PIN management using PBKDF2-SHA256 (100K iterations) with per-channel PIN isolation, account lockout mechanisms, and constant-time comparison to prevent timing attacks
- Developed OTP verification across multiple delivery channels (SMS, Email, Voice Call) with configurable expiration and status tracking
- Integrated with BankOne Core Banking, Estel Service, and a Generic Service gateway for real-time customer lookups, NIP (Nigeria Inter-Bank) fund transfers, and transaction history retrieval
- Engineered a dynamic fee calculation engine supporting flat, percentage, and capped fee models for P2P, NIP, and Cashout transaction types with configurable charge bands
- Designed a wallet management system handling agent profiles, balance inquiries, peer-to-peer transfers, and inter-bank transfers with full audit trails
- Implemented Repository + Unit of Work pattern over EF Core 9 with MySQL for transactional consistency across financial operations
- Added request/response logging middleware (Serilog) for observability and compliance audit trails
- Produced a standardized REST API with typed error codes, structured response models, and Swagger/OpenAPI documentation

Backend Software Engineer 10/2025
Uridium Technology Lagos
Greenwich Digital Banking & Investment Platform (Fintech | Microservices)

- Architected and developed a **microservices-based digital banking, stock trading, and investment platform** using **.NET 9, ASP.NET Core, PostgreSQL, Redis, and Kafka**

- Built **11 microservices + API Gateway (Ocelot)** with clean architecture and database-per-service pattern
- Designed **event-driven architecture (Kafka)** enabling loosely coupled communication across services
- Developed **digital onboarding with BVN/NIN + facial biometrics**, improving automated verification rates and reducing manual reviews
- Engineered **real-time stock trading integration (NGX via Zanibal)** with portfolio analytics and wallet operations
- Implemented **payment engine** supporting transfers and bill payments via CoralPay
- Designed **secure authentication & RBAC** (JWT lifecycle, MFA, biometric login, 45+ permissions)
- Deployed containerized services using **Docker + Azure Container Apps**, with CI/CD pipelines in Azure DevOps and centralized logging (Serilog + OpenSearch)

Backend Software Engineer 06/2024 – 10/2025
Wragby Business Solutions and Technologies Limited Lagos

- Led backend development of the **E-Waybill System**, a multi-tenant logistics platform designed to digitize and streamline waybill creation, approval workflows, and tracking across multiple depots and operational sites, reducing manual paperwork and improving operational visibility.

wBiz HR — Enterprise HRMS (Multi-tenant SaaS)

- Architected and developed a multi-tenant HRMS using **C# / ASP.NET Core, EF Core, Azure SQL**, supporting secure tenant isolation via JWT-scoped queries
- Built centralized **auth & access control** with JWT (RS256), Azure AD SSO, and hierarchical RBAC (200+ granular permissions)
- Designed and implemented **OWASP-compliant security** (rate limiting, security headers, SHA-512 signing, full audit logging)
- Developed **17 HR modules (350+ APIs)** including payroll, recruitment, performance, leave, and disciplinary systems
- Engineered a **Nigerian payroll engine** (PAYE, pension, NHIS) with payslip generation, bank integrations, and approval workflows
- Integrated **GTBank GAPS (SOAP/WCF)** for bulk salary payments with secure request signing and audit trails
- Built scalable infrastructure with **Azure Blob Storage**, background services (IHostedService), and automated notifications (SendGrid, SMTP)
- Implemented **document generation (PDF/Excel)** and workflow automation across HR operations.

Contributed to the development of BankOne, Africa's leading cloud-native core banking platform (Qore product), serving over 500 financial institutions across 8 African countries and processing billions in annual transactions. Worked within the BankOne CBA (Core Banking Application) engineering team, with primary ownership of the **Cheque Management API** and **Customer Management API**.

Cheque Management API (cheque-mgnt-api)

- Designed and built the Cheque Management microservice for BankOne CBA, handling cheque issuance, tracking, status lifecycle management, and validation workflows for financial institutions
- Implemented cheque clearing and reconciliation flows, integrating with core banking account modules for debit authorization and funds verification
- Built RESTful endpoints for cheque book requests, leaf tracking, stop-cheque instructions, and dishonour management with full audit logging

Customer Management API (customer-mgnt-api)

- Developed the Customer Management microservice supporting end-to-end customer onboarding, KYC data management, profile updates, and account linking for banks and microfinance institutions on the BankOne platform
- Implemented customer search, deduplication logic, and relationship management features used across USSD, mobile, internet banking, and corporate banking channels
- Built customer segmentation and status lifecycle endpoints (active, dormant, blacklisted) consumed by downstream modules including account management and compliance.

Associate Developer 04/2023 – 05/2024
Decagon Lagos

- Collaborated with a team to develop **Reward Your Teachers**, a web application that allowed students to send appreciation gifts to teachers via integrated payment services.
- Gained hands-on experience in **team-based Agile development**, working with cross-functional teams and applying software engineering best practices.

Delivered backend features for **Business Card Generator**.

- Implemented authentication, CRUD APIs, email verification, and Swagger docs.
- Deployed CI/CD pipelines with Azure DevOps and conducted automated testing.
- Showcased full software delivery lifecycle from design to deployment.

Backend Software Engineer 2021 – 2023
Rotbun Incorporation Akungba Akoko

- Spearheaded the development and maintenance of the company's enterprise website using **ASP.NET Core**, ensuring optimal performance, security, and scalability.
- Led cross-functional collaboration to gather requirements, design solutions, and implement features aligned with business goals, emphasizing clean, maintainable code and agile delivery.
- Proactively optimized website performance with **responsive design principles** and advanced SQL query tuning, reducing page load times by 50% while strengthening security controls.

IT Support Specialist 2019 – 2021
Adekunle Ajasin University Akungba Akoko

- Provided Microsoft Office and IT systems training, improving reporting efficiency by 30%.
- Managed infrastructure and data records, cutting system downtime by 50%.
- Created troubleshooting documentation, streamlining support and reducing repeat issues.

SKILLS

Languages & Frameworks
C#, ASP.NET Core, MVC, Entity Framework, REST APIs

Databases
SQL Server, PostgreSQL, MySQL

Cloud & DevOps
Azure, Docker, CI/CD, Azure DevOps, Swagger, Postman, Kafka

Practices
Microservices, OOP, Design Patterns, Domain-Driven Design, Agile/Scrum

Tools
Git/GitHub, Jira, Visual Studio, VS Code

Soft Skills
Problem-Solving, Collaboration, Critical Thinking, Leadership

PROJECTS

King Makers Solution Design
Produced a full enterprise solution blueprint covering **system architecture, API security, database optimization, and DevOps readiness**. Delivered recommendations that improved scalability and guided future implementation.

Freelance Applications
Built backend systems for SMEs including **invoicing tools and inventory management solutions**, using **ASP.NET Core, SQL Server, and Azure**. Automated manual processes and improved transaction speed for clients.

Designed proof-of-concept applications

Worked on this to strengthen expertise in microservices and cloud engineering.

- Example: **QR Code Business Card Generator** with **.NET Core APIs, EF Core, Swagger documentation, and Azure DevOps pipelines**.
- Applied CI/CD, authentication, and testing best practices in a full deployment cycle.

EDUCATION

Computer science 2016 – 2021
Adekunle Ajashin University Akungba Akoko

CERTIFICATES

- Certified Scrum Developer (CSD)
- Microsoft Azure Developer Associate In Progress
- Google Data Analytics Professional Certificate
- Microsoft DevOps Engineer Expert (AZ-400) In Progress
- Microsoft Azure Fundamentals (AZ-900) In Progress
- Certified Kubernetes Administrator (CKA) In Progress
